

Optical Power Meter Photosensitive Area

Overview

An increasingly common special-purpose OPM, commonly called a "PON Power Meter" is designed to hook into a live PON (Passive Optical Network) circuit, and simultaneously test the optical power in different directions and wavelengths. OverviewAn optical power meter (OPM) is a device used to measure the power in an signal. Additionally, these may be used with attenuating elements for high optical power testing, or wavelengt.

Optical Power Meters - optical power measurement

While most optical power meters have a free-space input for light, there are also fiber-coupled optical power meters, mostly for applications in the area of optical
