

Optical splitter ONU restart

Overview

In the navigation tree on the left, choose Advanced > Maintenance Diagnosis > Edge ONU Software Restart. The Optical Line Terminal (OLT) manages and schedules downstream and upstream data transmission, provides user access, allocates bandwidth, and handles network management functions. As a managed device, the Optical Network Unit (ONU) converts optical signals to electrical signals, enabling. How to check the optical power?

Different brands of ONUs have slightly different ways of checking, but they can usually be checked in the following ways: ① Web management interface (such as 192. This topic describes how to troubleshoot common faults in ONU abnormal state, including ONU fail to go online, fail to recover ONU configurations, mismatch of ONU profile, fail to auto discover an ONU, and ONU frequently goes offline.
