

Original Micro Module Manufacturer

Overview

The PCBAs (Printed Circuit Board Assemblies) are developed in close collaboration with clients and custom-designed for implants, medical devices, and high-end industrial products. Semiconductor fabrication plants are factories where integrated circuits (ICs), also known as microchips, are manufactured. The ideal choice for applications where performance, connectivity, safety, and security are needed Explore our cutting-edge boards & designs Shorten design-in time with our development tools Re-use of our embedded software libraries to get started Join our empowering community Infineon's. The Mellotron Micro Module is the smallest version available of the Digital Mellotron, and includes many of the features of the Micro. It includes one hundred 24-bit uncompressed sounds sourced from original first-generation Mellotron and Chamberlin tape libraries. ESP32 is capable of functioning reliably in industrial environments, with an operating temperature ranging from -40°C to $+125^{\circ}\text{C}$.
