

Otn200g optical module

Overview

M6500 200G multi-protocol multi-rate Transponder/muxponder is designed for building high capacity optical transport networks. It supports 2x 100G, 1x 100G□2x 40G, or 1x 100G□10x 10G OTN/SDH/Ethernet service transmissions, enabling. It is mainly used in the core layer and convergence layer network of national optical network backbone lines, operator MAN, data center interconnection. The 200G Muxponder transmitter supports two QSFP28 client interface and one CFP2 line-side interface to support single-channel 200Gbps large-grain data transfers.

Optical transport network

An optical transport network (OTN) is a digital wrapper that encapsulates frames of data, to allow multiple data sources to be sent on the same channel. This creates an optical virtual private network
