

Photovoltaic Intelligent Measurement Module

Overview

This project introduces an add-on device that monitors key data points essential for evaluating the daily performance of a photovoltaic (PV) array. It is designed for homeowners who are transitioning to solar energy for economic or environmental benefits. However, photovoltaic plants need to be monitored and maintained in order to reduce the electricity production costs (levelized cost of electricity/LCOE) of the plants. Our solutions for PV monitoring allow you to precisely monitor your PV plants - with low manual effort required for monitoring. An IAMMETER solar monitoring system follows a simple and flexible architecture: This architecture allows users to start with basic monitoring and gradually extend toward deeper analysis and automation.

Photovoltaic Intelligent Measurement Module

Artificial intelligent control of energy management PV system

Renewable energy systems, such as photovoltaic (PV) systems, have become increasingly significant in response to the pressing concerns of climate chan

[Contact Us](#)

PV monitoring systems - Detect anomalies at an early

Thanks to its modular design, the PV monitoring system can monitor up to 32 strings and can measure up to 50 A per string. It is powered by plant current, can
