

Pigtail Single Mode Dual Mode

Overview

Single Mode Pigtail (OS2): Has a 9/125µm core and is used for long-distance, high-bandwidth applications. Understanding the differences between single-mode and multi-mode fiber pigtails is crucial for selecting the right type for data centers, telecommunications, FTTH (Fiber to the Home) installations, or enterprise networks. According to different application scenarios and requirements, there are a variety. Fiber optic pigtails play a critical role in modern optical networks, serving as the interface between optical fibers and active or passive devices through fusion splicing. This reliable fiber pigtail cable comes with a pre-terminated connector on one end—ready for immediate.
