

PoE switch ACT port

Overview

All 5 ports are equal and it doesn't matter which one the modem/router is plugged into and which ones are used for computer and other devices downstream. Each port has its own led (I only see green lights) and those leds "twinkle" as port is active. Power over Ethernet switch (or PoE switch) is an access layer technology that combines data signals and electrical power into a single Ethernet cable connection, delivering both to enable a powered device (PD). 4x PoE+ (30W) port, Unmanaged, Fast Ethernet (10/100), Full duplex, Power over Ethernet (PoE), Rack mounting ACT 6 port, network switch, 10/100Mbps. To manage the switch, you can use the Web-based GUI or the configuration utility.
