

Quality Standards for Steel Cable Trays

Overview

IEC 61537 is the internationally recognized benchmark for metal cable tray systems. It applies to cable trays made of steel, stainless steel, aluminum, or other metallic materials. The standard ensures these systems can handle the physical and electrical loads they're exposed to. Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and utility installations. For proper installation, design, and maintenance, adherence to international standards is essential.

Quality Standards for Steel Cable Trays

Cablofil CP100GC Hot Dip Galvanised Steel Wire Cable Tray Cover

Hot dip galvanised steel protective cover for wire mesh cable trays. Designed to retain and shield cables in industrial installations, offering corrosion resistance, mechanical durability and halogen free
