

Reflection Spectral Analysis of Fiber Bragg Gratings

Overview

We present a detailed experimental study of Bragg grating reflection spectra around the wavelength of $\lambda_B = 1560$ nm for different tilt angles set between the fiber and the phase mask. An optical Bragg grating is a transparent device with a periodic variation of the refractive index, so that a large reflectance (less precisely: reflectivity) may be reached in some wavelength range (bandwidth) around a certain wavelength which fulfills the Bragg condition where λ is the vacuum.

Reflection Spectral Analysis of Fiber Bragg Gratings
