

# Requirements for Customized Frames of Distribution Boxes

## Overview

---

Requirement confirmation: Understand specific electrical parameters (rated voltage and rated current, model and quantity of electrical components inside the distribution box, such as circuit breakers, contactors, motor protectors, etc. These frames not only provide physical protection but also enhance accessibility, scalability, and integration with existing systems. Distribution box refers to the equipment used in the power distribution system to distribute, protect, and control electrical energy. Tailored to Your Exact Requirements: Customization lets you specify everything—from circuit layout and cable entry points to exact panel size—ensuring a perfect fit on-site. Distribution boxes and switch boxes shall be manufactured from cold-rolled steel sheet or flame-retardant insulating material Steel Thickness: Switch box enclosures:  $\geq 1$ .

## Requirements for Customized Frames of Distribution Boxes

---

### Why choose a customized distribution box

In response to development in technology and diversification of user requirements, customized distribution boxes have increasingly been the preferred first choice for
