

Router wireless speed can be measured up to 200m fiber optic speed

Overview

For most homes up to 200 m² (or with open layouts where signal must travel ~20–30 meters linearly), a dual-band Gigabit router like the TP-Link EC220-G5 or Intelbras W5 AC1200 is sufficient. Over the past year, more users in Brazil and Latin America have upgraded to 200 Mbps fiber plans—and discovered that their old routers can't deliver the speed or coverage they paid for. 4 GHz band, a router can typically reach up to 300 feet (91 meters) or more in open spaces. The signal's ability to travel farther makes it suitable for extending coverage to outdoor areas like backyards, patios, or garages. First, keep in mind that in data communications, speed is measured in kilo bits (or mega bits) per second, designated as kbps, or Mbps. With the many options available on the market, picking the best router for fiber internet can be tricky.
