

Sealing holes in the distribution box

Overview

After choosing your inlet/outlet holes and cutting them out, the seal is easy to install. The lifelines of highly automated industrial production for electrical distribution and for the control and safety technology of manufacturing plants come together in control cabinets and electrical distribution boxes right down to the micro distribution boards. Our sealing modules have removable layers enabling a perfect fit to cables and pipes of different sizes. This article explains how to safely air seal electrical boxes to tighten your home's thermal envelope. Polylok risers fit seamlessly and are available in two heights - 150mm (6") or 300mm (12") - please ask for more information. With respect to junction boxes (receptacles and switches) the common approach seems to be sealing the gap between the box and the wall with spray foam and/or caulking and optionally adding a gasket. Polylok offers the only catch basin and distribution box seal on the market that accepts multiple size pipes.
