

Sealing inside fire protection electrical cable trays

Overview

Service penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. Electrical, IT, and telecommunications lines are indispensable for the usage of buildings. Various types of fire-stopping products can be used for internal and/or external sealing of penetrations, including intumescent mastics/gaskets, pillows, compounds, and metal sleeves. The term 'intumescent' is used when referring to materials which expand to provide a seal when exposed to a source. * Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for each opening. UL Listed Systems Concrete Wall - C-AJ-4056 3 HR F-Rating, 3/4 HR T-Rating Gypsum.

Sealing inside fire protection electrical cable trays

Fire stop section of the cable tray and cable management NEMA

Use this product in new construction or update your fire protection in a renovation - the optional mounting bracket opens easily allowing retrofit installations.
