

Service life of flame-retardant cable trays

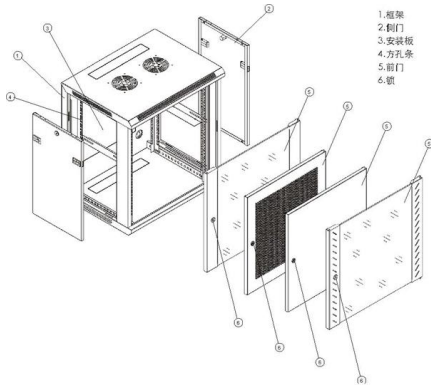

Overview

2 times higher than that of a steel cable tray, but it offers a service life that is more than five times greater. The weight of the flame-retardant cable tray is also 30% heavier than the steel cable tray. The fire-resistant cable tray and conduit assemblies play a critical role in maintaining safe and compliant industrial operations, particularly within hazardous locations such as chemical plants, oil refineries, and manufacturing facilities. FireMaster® products insulate cable trays carrying instrument control cables to ensure that the cables can operate long enough to allow process shut down during fires.

Service life of flame-retardant cable trays

FIRE RESISTANT PROOF CABLE TRAY, DIN STANDARD E90

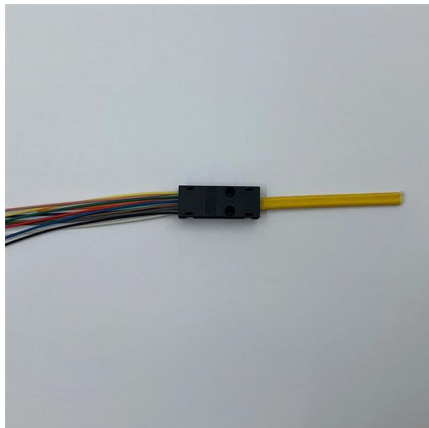

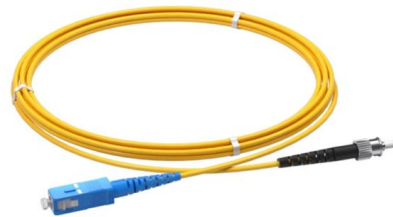

The fire test verifies whether the Cablofil cable tray system is working properly ensuring continued service and electrical integrity of critical power and data cables including emergency lighting and
