

Single-mode fiber optic patch cord for switch

Overview

They feature a 9/125um core, low dispersion, and support only one transmission mode, which brings low signal loss and makes them ideal for long-haul communication. These short fiber optic cords connect transceivers, switches, patch panels, and servers. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter. Also available are single mode patch cables with AR-coated FC/PC or FC/APC connectors for improved fiber-to-free-space coupling.
