

Standard Configuration of Electrical Distribution Box in the Entrance Hall

Overview

The main distribution box shall be located in the area close to the power supply; the distribution box shall be installed in the area with relatively concentrated electrical equipment or load; the distance between the distribution box and the switch box shall not exceed. Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy. It involves the placement of breakers, contactors, busbars, terminals, protective devices, and wiring in a structured and safe. This Electrical Installation Wiki is a collaborative platform, brought to you by Schneider Electric: our experts are continuously improving its content, collaboration is also open to all.

Standard Configuration of Electrical Distribution Box in the Entrance

Pre-Terminated Patch Panel

Standard 19" width Max 144 fibers in 1U MPO/Fusion Dual-Purpose

Removable Cable Management Tray

Transparent Front Cover

High-Quality Matte Coated Steel
