

Standards for Structured Cabling Systems

Overview

In, Structured cabling is the design and installation of a complete, standards-compliant telecommunications cabling infrastructure for,, or campus cabling.

Standards for Structured Cabling Systems

Structured cabling

Manufacturer-neutral cabling standards have existed since 1995, as globally valid standards (ISO/IEC 11801 plus others), as European standards (EN 50173) and

Structured cabling

In telecommunications, Structured cabling is the design and installation of a complete, standards-compliant telecommunications cabling infrastructure for building, platform, factory or campus cabling infrastructure. It is a systematic and organized approach that involves using a set of standardized, smaller elements (hence structured) called subsystems. To create a single, flexible, and scalable infrastructure that supports m
