

# **Techniques for making 90-degree cable tray elbows**

## Overview

---

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. The length of the bottom side (bottom diagonal) after bending the cable tray should be equal to the width of the cable. This manual is designed to guide workers through the detailed production process of ladder cable trays, including the manufacture of horizontal elbows, tees, crosses, reducing bends, and vertical bends, with emphasis on precision, safety, and quality control. Follow along to mark, cut, file, and bend the tray to perfection! #electriciansoftiktok #electrician #sparky #howto #tutorial #tips

Keywords: 90-degree bend cable tray, bending cable tray tutorial. How to Make a 90-Degree Elbow for 200×100 Cable Tray | Professional Fabrication Description (□□□□□□□□□□) In this video, I will show you the step-by-step process of making a professional 90-degree elbow for a 200×100mm Cable Tray.
