

The network rack door won't close

Overview

Poor airflow design, inadequate cooling systems, or overcrowded racks can cause this issue. For some reason, they installed them as closely as possible (side by side in rows of 6 racks per row) - using the little tiedown bars they connected them using the two closest holes, thus we can't figure out how to get the doors off very easily, especially the rear doors. When I install a new server (2850 or newer) the mounts for cable management hits our 42u rear rack door and does not allow the door to close. Efficient network rack operation is critical for data center performance, but understanding network rack challenges and how to solve them can feel overwhelming. Overlooked issues can turn into costly problems, especially when racks house sensitive and expensive IT equipment.

The network rack door won't close

rackmount

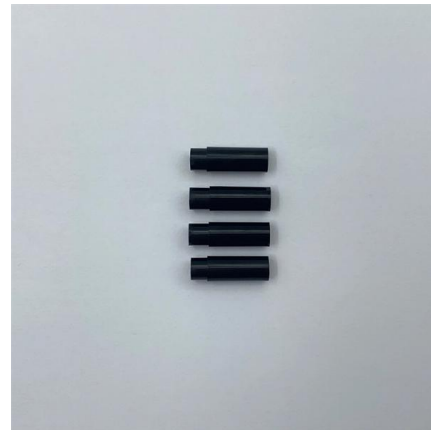

At the very least, remove the doors so nobody can close them accidentally and smash something. Most rack doors come off just by pulling a pin
