

The pigtail was not properly fused

Overview

It is recommended to contact an electrician to address aluminum wiring issues, as they can either replace existing wires or repair them using specialized connectors like AlumiConn or COPALUM. A pigtail is a short piece of copper wire, typically six to eight inches long, that serves as a transition piece. A faulty pigtail can lead to anything from intermittent malfunctions to complete system failure, even posing a significant safety hazard. The process saves time and money by allowing repairs rather than full component replacements.
