

The switch has two aggregation ports

Overview

In order to configure 2 or more ports (up to 8) to be a port aggregate, simply navigate to Switching > Monitor > Switch ports and select the target ports, then choose "Aggregate". It is recommended that you do not have the target ports physically connected to anything during this. All UniFi Switches support aggregation, except USW-Flex, USW-Flex-Mini and USW-Ultra. The MS's LACP hashing algorithm uses traffic's source/destination IP, MAC, and port to determine which bonded link to utilize. Ethernet port aggregation, also known as link aggregation, is a networking technique that combines multiple physical network ports into a single logical port.

The switch has two aggregation ports

Link Aggregation and Load Balancing

In order to configure 2 or more ports (up to 8) to be a port aggregate, simply navigate to Switching > Monitor > Switch ports and select the target ports, then choose "Aggregate".
