

Topographic chart instrument for measuring eye aberration

Topographic chart instrument for measuring eye aberration

Comparing Wavefront Aberrometers

This instrument allows assessment of all of the wavefront aberrations present in a patient's eye and functions on greater than 99% of patients. The measurement range for sphere is

Corneal Topography Guide

Corneal topography is a non-invasive imaging technique that maps the curvature and shape of the cornea for diagnosis and treatment planning.

Corneal elevation topographic maps assessing different diseases

Orbscan topography system has been used to assess corneal topography by measuring both corneal surfaces simultaneously. It provides elevation maps on the surface and further axial

What Is Corneal Topography, and When Is It Necessary?

A corneal topographer is essential for determining how well your eyes are doing. Eye doctors use this cutting-edge technology to map the cornea's surface. It provides
