

Tray-type cable tray production unit

Overview

Cable tray manufacturing relies on a coordinated production line of specialized machines: a roll forming line shapes the profile, a CNC press brake handles secondary bending, a punch press creates mounting holes and ventilation slots, and a shearing line cuts the finished. In the modern industrial landscape, Cable Tray Production Equipment plays a pivotal role in ensuring the high quality and efficiency of cable tray manufacturing. It forms the sheet into specific shapes and specifications through decoiling, leveling, punching, notching, and roll forming. Cable tray making machine is a fully automatic, high-efficiency production line designed for the continuous manufacturing of various types of cable trays, including ladder-type cable tray, perforated cable tray, and solid-bottom cable tray.

Tray-type cable tray production unit

Types of Cable Trays: Ladder, Perforated, Basket, Solid

Cable trays support insulated electrical cables in industrial and commercial settings. There are several types of cable trays, including ladder,
