

Two sets of fiber optic cables

Overview

Summary: Fibre optic cables come in various types depending on a specific networking demand. They are of the two main categories: single-mode for high-speed transfer over long distances and multi-mode for shorter lengths within buildings or campuses. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. This guide breaks down the most common and specialized fiber optic cable types, helping you identify the best fit for your installation environment, bandwidth requirements, and safety regulations. Communication alternates between transmitting and receiving signals, but not simultaneously.
