

UK FOB Vertical Cavity Surface Emitting Laser OSFP

Overview

The surface emission from a bulk semiconductor at ultra-low temperature and magnetic carrier confinement was reported by Ivars Melngailis in 1965. The first proposal of short VCSEL was done by Kenichi Iga of Tokyo Institute of Technology in 1977. Contrary to the conventional Fabry-Perot edge-emitting semiconductor lasers, his invention comprises a short laser cavity less than 1/10 of the edge-emitting lasers vertical to a wafer s.

vertical cavity surface emitting laser

A vertical cavity surface-emitting laser (VCSEL) is a type of laser that offers advantages such as low power consumption, circular output beam, and on-wafer testing capability.

Optical splitter cassette type refers to the port 2.0 mm / 3.0mm slip-on fiber multichannel direct output with a plastic box packaging protection and easy to use.

Optical splitter rack mount type is using metal box packaging which can be installed in 2U frame or cabinet.

Optical splitter GBT box type is made by flame retardant material box or plate packaging. Mainly suitable for cable points fiber box and wall-mounted terminal box.

Optical splitter main type refers to the port 0.5 mm slip-on fiber multichannel direct output with a compact design and easy to use.
