How to Configure Virtual Router Redundancy Protocol (VRRP) on

This article explains how to configure Virtual Router Redundancy Protocol (VRRP) on Dell Networking PowerConnect with firmware 4.0 and higher switches.

vrrp configuration with fully redundant switches

I configured vrrp in the router for the redundancy, but due to the topology, each router have 2 connections from switch, so I configured the 4 vrrp interfaces for each physical interface.

Virtual Router Redundancy Protocol

The Virtual Router Redundancy Protocol (VRRP) is a computer networking protocol that provides for automatic assignment of available Internet Protocol (IP) routers to participating hosts.

Typical VRRP Configuration

To ensure nonstop service transmission, a VRRP group in active/standby mode needs to be configured on Switch A and Switch B. The host uses Switch A as the default gateway to connect to the Internet.
