

What are power distribution automation products

Overview

Distribution automation (DA) is a family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and optimize data to improve the operational efficiency of its distribution. From primary equipment to control centers, Hitachi Energy's comprehensive portfolio of distribution automation solutions enables utilities to see what is happening inside the distribution grid, ensuring efficient, reliable and uninterrupted operation, anywhere, anytime. Electric utility companies are under increasing pressure to improve reliability, minimize customer outages and optimize. It includes a range of systems and devices designed to automate and optimize the operation and control of electrical.

What are power distribution automation products

Distribution Automation , Hitachi Energy

From primary equipment to control centers, Hitachi Energy's comprehensive portfolio of distribution automation solutions enables utilities to see what is happening
