

# **What are the core side lighting modules**

## Overview

---

LED modules with high power LEDs, ideal for particularly slim single and double side lightboxes. M-Fibre is a complete system of side light fibres and compact, high-performance LED modules for implementing lighting solutions that are optimised to the installation space and can be installed flexibly over a length of up to several metres. In the era of 5G, AI, and high-speed data centers, optical modules serve as the core bridge for converting electrical signals to optical signals (and vice versa), enabling fast, reliable data transmission across networks. Sidelight fibers are optical waveguiding fibers that are manufactured in such a way that the light guided in their core is not only transmitted to the fiber endface, but also emitted at the side. Why is "What types of LED modules are most suitable for modern lighting projects?"

" one of the most frequently asked questions today?

LED modules have become a key component in modern lighting design, offering flexibility, modularity, and high-quality illumination. Powerful LEDs enable a wide range of applications – and can be adapted to just as many specific requirements. Our motorized components, complex filter concepts and integrated trigger functions turn light sources into intelligent lighting systems.
