

# What type of cable tray is used for a fan

## Overview

---

A perforated cable tray—also called a ventilated trough tray —features a solid bottom with regularly spaced ventilation holes and continuous side rails. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Ladder Type Cable Tray The ladder type cable tray consists of two side rails connected by rungs, allowing excellent airflow around cables.
