

What type of network cable should be used in the distribution box

Overview

Ethernet cables evolved from Cat3 to Cat8, each improving in speed, bandwidth, and shielding. While Cat5e and Cat6 are common for homes and offices, Cat7 and Cat8 serve high-performance networks and data centers. Choosing the right cable ensures reliability, reduced interference, and future-proof. To connect two or more computers or networking devices in a network, network cables are used. Cable categories are performance specifications that apply specifically to twisted pair cables.
