

Where are cable ties needed for fiber optic cable laying

Overview

Depending on the maker of the fiber cabling, the proposed minimum diameter for bending a fiber optic cable can vary significantly. All fiber optic cables have specifications that must not be exceeded during installation to prevent irreparable damage to the cable. Most CATV systems are analog optical conversions of coax signals, so reflectance of connectors is a big problem, requiring APC (angled PC) connectors.

Where are cable ties needed for fiber optic cable laying

The FOA Reference For Fiber Optics

Most false floor systems include cable trays for fiber optic cables. An armored indoor cables is sometimes used in underfloor applications to protect the fiber from
