

Wiring of frame-type distribution box

Overview

Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. It takes the incoming power and safely distributes it to different circuits throughout your building. The distribution box (DB box) helps safely and efficiently distribute electrical power. The ArTu distribution switchboards are enriched by the new L series for applications up to 630A, which widens the ABB offer in the secondary and terminal distribution sector: a series able to combine quality performances with maximum selection and assembly simplicity.
